

CodaOctopus COLMEK

SPECIALIZED ENGINEERING CAPABILITIES

You don't develop a track record like Colmek's without broad expertise, which is why our staff has long included engineers with a broad range of specialties. Whether your need is a military application that must juggle massive amounts of information while in flight, or a scientific application to gather, store and process data at the bottom of the ocean, our engineers understand the problem as well as anyone in the world.

At CodaOctopus Colmek we don't build products you can buy at your local computer store. Colmek's staff of electrical, mechanical, and software engineers focus on specialized design applications that provide solutions to complex, one-of-a-kind problems.

With a variety of military and commercial application experience, Colmek and its supporting staff have focused on designing processors, custom software, ruggedized chassis and housings, circuit card design, computer sub-assemblies, massive storage capacity recorders, object identification software, video displays, and telemetry systems. Our inventions have performed indispensable operations in military aircraft, commercial mining and oil exploration vessels, military and commercial ships, rugged land vehicles, and portable shelters.

To ensure success across this range of tasks Colmek employs a seasoned team of engineering specialists including logisticians, meteorologists, and specialty fabrication technologists. Combined, the Colmek Team resolves systems integration problems, creates better products, and oversees their production in a variety of specialized uses.

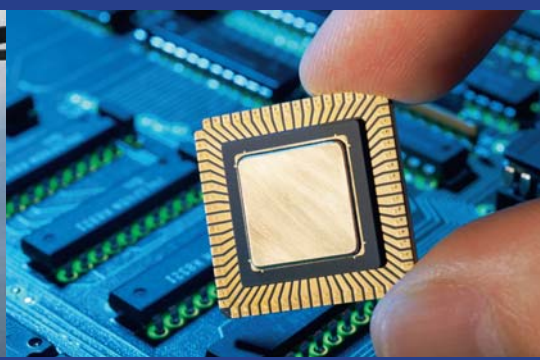

The engineering staff is capable of producing high performance hardware and software solutions, as well as re-designing existing systems. We're smart, we're focused, and we're always looking for new challenges. Does your firm have a problem it can't seem to fix? Colmek engineers focus on providing cost-effective, real-world hardware and software solutions that work for the long-term. Let us earn your business.

COLMEK

SPECIALIZED ENGINEERING CAPABILITIES

Engineering specialties

- Hardware & software design
- System integration
- Feasibility studies & development of systems
- Prototype development
- Existing system upgrades with new technology
- Research & design
- Sonar imaging

partial customer list

- Northrop Grumman
- Lockheed Martin
- Raytheon
- Honeywell
- United States Navy
- Benthos Inc.
- ARINC

systems integration

- Designed & fabricated the processors used in the AN/AQS-14 remote mine hunting systems
- Upgraded processors on more than 60 Navy MH-53 helicopters
- Designed, produced & operated advanced side-scan sonar & telemetry system used in the discovery of the Titanic and German battleship Bismarck
- Assisted in design and upgrade of processors for the AN/SLQ 48 mine neutralization systems
- Developed multi-screen video display systems for commercial and military use
- Continued development of advanced video graphic, real-time display systems
